

Compact cylinders ADN/AEN, to ISO 21287

FESTO

Festo Core Range
Solves the majority of your automation tasks

Worldwide:
Simply good:
Fast:

Quickest delivery – wherever, whenever
Expected high Festo quality
Easy and fast to select

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Just look
for the
star!

Key features

At a glance

Sensor slots on three sides for flush mounting of proximity switches

Piston rod with choice of male or female thread

Mounting option:
Female thread and through-hole

Centring hole in the end cap suitable for centring pins ZBS

Magnet for contactless position sensing

Integrated cushioning for absorbing residual energy

More than the standard

- The compact cylinders comply with or are based on the ISO 21287 standard, depending on the piston diameter
- The ADN/AEN is characterised by its compact design and wide range of application thanks to the large number of variants
- The variants can be configured using a modular product system

Powerful

- Integrated cushioning for absorbing residual energy
- Long service life thanks to exceptional cushioning characteristics and low friction values

Convenient

- Easy to mount with a comprehensive range of mounting accessories for just about every type of installation
- Highly flexible thanks to the wide range of variants
- Contactless position sensing using proximity switches

Reliable

- Optimised manufacturing methods, patented technology and more than 40 years of experience in the field of cylinders make Festo and ADN/AEN a great partner

Cushioning types

Cushioning P

Cushioning PPS

Operating mode

- The drive is fitted with polymer elastic end-position cushioning

Operating mode

- The drive has self-adjusting, pneumatic end-position cushioning

Application

- Small loads
- Low speeds
- Small cushioning capacity

Application

- Larger loads
- Higher speeds
- Larger cushioning capacity

Advantages

- No adjustment required
- Saves time

Advantages

- No adjustment required
- Cushioning capacity is four times bigger than ADN-...-P
- Saves time
- Reduces noise

Cushioning capacity of ISO 21287 and ISO 15552

The cushioning capacity of the compact cylinder ADN-...-PPS fills the gap between ADN-...-P and standards-based cylinders to ISO 15552.

For manufacturing lithium-ion batteries

ADN-...-F1A

Recommended for production systems for manufacturing lithium-ion batteries. Metals with copper, zinc or nickel as the main constituent are excluded from use. Exceptions are nickel in steels, chemically nickel-plated surfaces, printed circuit boards, cables, electrical plug connectors and coils.

Accessories

Please contact your Festo representative for information on which accessories are suitable for manufacturing lithium-ion batteries

Key features

Variants from the modular product system		
Symbol	Key features	Description
	S1 Reinforced piston rod	Increased lateral loads. Absorbs many times more lateral load than a basic cylinder
	S2 Through piston rod	The piston rod can be used for attachment at both ends of the cylinder
	S6 Heat-resistant seals	Temperature resistance up to max. 120°C
	S10 Constant motion (slow speed) at low piston speeds	<ul style="list-style-type: none"> • Break-away pressure: very low • Dynamic response: suitable for very slow, constant and stick-slip-free movements Application example: slow, constant feed motion
	S11 Low friction	<ul style="list-style-type: none"> • Break-away pressure: very low • Dynamic response: especially suitable for slow movements with considerably reduced system friction • Application example: slow applications where standstill is critical
	S20 Through, hollow piston rod	The piston rod can be used for attachment at both ends of the cylinder. The piston rod is hollow inside. This means it can be used to carry vacuum or compressed air
	K2 Extended male piston rod thread	–
	K5 Custom piston rod thread	Metric standard thread to ISO
	K8 Extended piston rod	–
	K10 Smooth anodised aluminium piston rod	Ideal for use in welding environments: <ul style="list-style-type: none"> • Protection against welding spatter • Small moving masses • Harder surface compared to steel • Long service life
	KP With clamping unit	Integrated clamping unit on the piston rod
	EL With end-position locking	Positive locking in the end position as a drop guard. If there is a drop in pressure, the cylinder is secured in its end position to prevent it from dropping
	Q Square piston rod	Protection against rotation. For position-oriented feeding
	R3 High corrosion protection	All external cylinder surfaces comply with corrosion resistance class 3 to Festo standard 940 070. The piston rod is made from corrosion- and acid-resistant steel
	R8 Dust protection with wiper seal	The cylinder has a hard-chrome-plated piston rod and a hard wiper seal, which protects against dry, dusty media
	TL Captive rating plate	Laser-etched rating plate. Easy to identify spare parts, even after years in a harsh environment
	TT Low temperature	Temperature resistance down to max. -40°C
	F1A Recommended for production plants for manufacturing lithium-ion batteries	Cylinders free of copper, zinc and nickel ($\leq 1\%$)

Mounting attachments and accessories		Description	→ Page/Internet
[1]	Compact cylinder ADN	Double-acting cylinder	13
	Compact cylinder AEN	Single acting cylinder	61
[2]	One-way flow control valve GRLA/GRLZ	For regulating speed	85
[3]	Push-in fitting QS	For connecting tubing with standard O.D.	qs
[4]	Foot mounting HNA	For bearing or end caps	74
[5]	Flange mounting FNC	For bearing or end caps	75
[6]	Trunnion flange ZNCF/CRZNG	For bearing caps	82
[7]	Trunnion support LNZG	For trunnion flange ZNCF/CRZNG	83
[8]	Swivel flange SNCL/SNCL-...-R3	For end caps	76
[9]	Multi-position kit DPNA	For connecting two cylinders with the same piston diameter to form a multi-position cylinder	79
[10]	Swivel flange SNCS/CRSNCS/SNCS-...-R3	For end caps	77
[11]	Swivel flange SNCB/SNCB-...-R3	For swivel flange SNCL	81
[12]	Clevis foot LBN/CRLBN	For swivel flange SNCL	80
[13]	Clevis foot LBG/LBG-...-R3	For swivel flange SNCS	78
[14]	Proximity switch SME-8	Can be integrated in the cylinder profile barrel	87
[15]	Proximity switch SME/SMT-8M	Can be integrated in the cylinder profile barrel	87
[16]	Proximity switch SMT-8G	Inserted into the slot lengthwise	87
[17]	Slot cover ABP-5-S	For protecting the sensor cables and the sensor slots from contamination	87
[18]	Proximity switch SMPO-8E	Pneumatic output signal	87
[19]	Mounting kit SMB-8E	For proximity switch SMPO-8E	87
[20]	Self-aligning rod coupler FK/CRFK/DARP	To compensate for radial and angular deviations	84
[21]	Rod clevis SG/CRSG	Permits a swivelling movement of the cylinder in one plane	84
[22]	Adapters AD	For mounting a suction cup on a hollow piston rod	84
[23]	Coupling piece KSG/KSZ	To compensate for radial deviations	84
[24]	Rod eye SGS/CRSGS	With spherical bearing	84
[25]	Right-angle clevis foot LQG	For rod eye SGS	85
[26]	Rod clevis SGA	With male thread	84

Note

These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Permissible impact speed:

$$V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$$

V Permissible impact velocity

E Max. impact energy

m1 Moving mass (drive)

m2 Moving payload

Maximum permissible mass:

$$m_2 = \frac{2 \times E}{v^2} - m_1$$

Note

The maximum impact energy is still maintained in combination with the self-adjusting cushioning PPS

Max. energy conversion capacity [J]

Piston ø	20	25	32	40	50	63	80	100
For self-adjusting cushioning (PPS)	0.65	0.8	1	1.7	2.8	4.8	8	12

Note

If used in safety-oriented applications, additional measures are necessary, e.g. in Europe the standards listed in the EC Machinery Directive must be observed.

Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-related component in control systems.

2) More information www.festo.com/x/topic/crc

Datasheet

Impact energy [J]								
Piston \varnothing	20	25	32	40	50	63	80	100
Max. impact energy in the end positions	0.2	0.3	0.4	0.7	1	1.3	1.8	2.5

Note

These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Permissible impact speed:

$$V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$$

Maximum permissible mass:

$$m_2 = \frac{2 \times E}{V^2} - m_1$$

V Permissible impact velocity
 E Max. impact energy
 m1 Moving mass (drive)
 m2 Moving payload

Forces [N]								
Piston \varnothing	20	25	32	40	50	63	80	100
Theoretical force at 6 bar, advancing	188	295	483	754	1178	1870	3016	4712
Theoretical force at 6 bar, retracting	141	247	415	633	990	1682	2721	4418
Static holding force	350	350	600	1000	1400	2000	5000	5000

Note:

The specified holding force refers to a static load. If this value is exceeded, slippage may occur. Dynamic forces occurring during operation must

not exceed the static holding force. The clamping unit is not backlash-free in the clamped condition if varying loads are applied to the piston rod

Actuation

The clamping unit may only be released if the forces at the piston have reached equilibrium. Otherwise, there is a risk of accidents due to sudden movement of the piston rod.

Blocking off the compressed air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

Max. lateral force F_q as a function of projection x

Weight [g]								
Piston \varnothing	20	25	32	40	50	63	80	100
Product weight with 0 mm stroke	282	344	503	789	1268	1894	3973	5497
Additional weight per 10 mm stroke	22	26	29	45	60	68	93	112
Moving mass with 0 mm stroke	53	63	100	173	296	368	755	932
Additional mass per 10 mm stroke	6	6	9	16	25	25	39	39

 **Note**

If used in safety-oriented applications, additional measures are necessary, e.g. in Europe the standards listed in the EC Machinery Directive must be observed.

Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-related component in control systems.

ELH	Rear							
Cushioning	Elastic cushioning rings/pads at both ends							
Position sensing	Via proximity switch							
Type of mounting	With female thread							
	Via accessories							
Mounting position	Any							

 **Note**

- Screws with a head or similar must not be used in place of end-position locking, as there is a risk that the function will be impaired if they are screwed in too deeply.
- The exhaust bore must not be closed.
- The piston rod can be locked in any stroke position once the drive is brought mechanically into its end position.
- End-position locking has been designed to prevent the load from dropping in case of pressure failure.
- Avoid operating the cylinder using a 3-way valve, especially with the function "mid-position closed" and those with "metallic sealing". The residual pressure that is enclosed on the locking side of the cylinder can release the locking function.
- The cylinder must not be operated with external stops (e.g. shock absorber, buffer, oil brake, etc.):
 - It may not be possible to reliably reach the internal end position.
 - The locking mechanism can wear out prematurely. (If the pressure in the opposite chamber drops to less than the locking pressure, the locking piston will prematurely fall to its lower end position.)

Datasheet

Operating and environmental conditions								
Piston \varnothing	20	25	32	40	50	63	80	100
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]							
Note on the operating/pilot medium	Lubricated operation possible (in which case lubrication will always be required)							
Operating pressure	[MPa]	0.25 ... 1			0.15 ... 1			
	[bar]	2.5 ... 10			1.5 ... 10			
Ambient temperature ¹⁾	[°C]	-20 ... +80						
Corrosion resistance class CRC ²⁾	2							

- 1) Note operating range of proximity switches
 2) More information www.festo.com/x/topic/crc

Forces [N]								
Piston \varnothing	20	25	32	40	50	63	80	100
Theoretical force at 6 bar, advancing	188	295	483	754	1178	1870	3016	4712
Theoretical force at 6 bar, retracting	141	247	415	686	1057	1750	2827	4524
Static holding force	250	500			2000		5000	

Sizing example

Note
 When sizing pneumatic cylinders it is recommended as a basic principle that only 50% of the indicated theoretical forces (see above) be used

Assuming:
 Mounting position = vertical
 Workpiece load = 44 kg
 $F = m \times g = 44 \text{ kg} \times 9.81 \text{ m/s}^2 = 431.6 \text{ N}$

To be determined:
 Suitable piston diameter

Example with 32 mm piston diameter:
 Theoretical force at 6 bar, advancing = 483 N
 50% of the theoretical force = 241.5 N
 Static holding force with 32 mm piston diameter = 500 N
 The static holding force of end-position locking is within the permissible range (max. 500 N) for a workpiece load of 44 kg (431.6 N); however, the cylinder would be at 89% capacity.
Results:
 A cylinder with a piston diameter of 40 mm is therefore recommended for this application.

Impact energy [J]								
Piston \varnothing	20	25	32	40	50	63	80	100
Max. impact energy in the end positions	0.2	0.3	0.4	0.7	1	1.3	1.8	2.5

Note
 These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Permissible impact speed: $V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$

Maximum permissible mass: $m_2 = \frac{2 \times E}{v^2} - m_1$

V Permissible impact velocity
 E Max. impact energy
 m1 Moving mass (drive)
 m2 Moving payload

Max. lateral force Fq as a function of projection x

Datasheet

Weight [g]								
Piston \varnothing	20	25	32	40	50	63	80	100

Forces [N] and impact energy [J]										
Piston ø	12	16	20	25	32	40	50	63	80	100
AEN										
Theoretical force at 6 bar, advancing	56	95	162	259	441	702	1098	1783	2899	4511
AEN-...-Z, pulling										
Theoretical force at 6 bar, retracting	39	65	115	211	373	634	977	1663	2610	4323
Max. impact energy at the end positions	0.04	0.04	0.04	0.08	0.1	0.15	0.18	0.28	0.35	0.7

 **Note**

These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Permissible impact speed:

$$V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$$

Maximum permissible mass:

$$m_2 = \frac{2 \times E}{v^2} - m_1$$

V Permissible impact velocity
E Max. impact energy
m1 Moving mass (drive)
m2 Moving payload

Datasheet

Spring return force F as a function of stroke l

∅ 12 ... 20

∅ 25 ... 100

Note

The degree of friction depends on the mounting position and the type of load involved. Single-acting cylinders should as far as possible be operated without transverse loads.

Accessories

Clevis foot LBG/LBG-...-R3

The pivot pin is secured against rotation with a spring pin.

Material:

LBG 32 ... 63: Stainless steel casting

LBG 80 ... 125: Spheroidal graphite cast iron

LBG-...-R3: High-alloy stainless steel

Free of copper and PTFE

RoHS-compliant
